## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on November 22, 2005 has been entered.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Erickson (US 5,815,016).

Claims 1, 8 and 14.

Erickson describes a phase locked loop (see Fig.1) and programmably adjusting the phase of a reference signal (at input terminal 11), comprising;

a digital feedback delay line (VCDE) having a plurality of taps (21, 22, 23) cascaded from an input to an output with each of the taps having a fixed delay and tap selection logic (24,25,26) coupled to the delay line for delivering a single signal to active one of the plurality of taps, thereby inserting delay into the PLL, wherein

Art Unit: 2638

the corresponding delay could include fixed delays associated with a multiple of the plurality of taps.

Additionally regarding claim 14, Erickson describes a system clock and a plurality of interconnected modules having a PLL for synchronously communicating with each other. See col. 1, lines 18-62.

Claims 2, 9 and 15.

Erickson shows that each of the taps comprises a multiplexer.

Claim 3, 10 and 16.

Erickson shows that the multiplexer is a 2:1 input multiplexer.

Claims 4, 5, 11, 12 and 17 and 18.

Erickson shows an embodiment where the number of taps is three. However, since this is an exemplary embodiment, Erickson actually teaches any number of taps, thus reading on at least four taps or 32 taps.

Claims 6, 13 and 19 .

Erickson shows that the corresponding delay results from the fixed delays associated with the activated tap and adjacent taps between the activated tap and the output. See col. 5, lines 4-12.

Claims 7 and 20.

Though not illustrated, the control element 24,25 and 26 comprises a register since in a digital device, the control word is stored in a register before it is delivered.

### ***Conclusion***

Art Unit: 2638

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Curran et al (US 2001/0036160) teaches a variable delay line with multiplexers. Fig.5.
